

ABSTRACT OF THE DISCLOSURE

An auto-test system for testing the stability of a computer is disclosed. First, a tested computer is placed in a testing chamber. Afterwards, the temperature in the testing chamber and the operating voltage of the computer under test are set automatically, and the test results are also recorded automatically by the auto-test system of the present invention. Consequently, the stability test of the computer under test can be carried out automatically, and the manpower needed for setting the operating temperatures and operating voltages can be saved.
